КОММЕРЧЕСКИЕ АВТОМОБИЛИ И АВТОБУСЫ

КОМПЛЕКСНЫЙ ПОСТАВЩИК ДЛЯ ВАШИХ ГРУЗОВЫХ АВТОМОБИЛЕЙ

ТЕРМОМЕНЕДЖМЕНТ ДЛЯ КОММЕРЧЕСКИХ АВТОМОБИЛЕЙ И АВТОБУСОВ

Компания Behr Hella Service является одним из ведущих поставщиков оборудования на рынке запчастей для системы кондиционирования автомобиля и охлаждения двигателя. До сих пор мы, прежде всего, были известны как компетентный и надежный партнер компаний Mercedes и MAN Nutzfahrzeuge. Но мы способны на большее – в самых разных аспектах.

Для того, чтобы всегда предлагать Вам – нашим клиентам, услуги и товары, которые Вам действительно нужны, мы постоянно работаем над нашим ассортиментом. И поэтому мы расширили наш ассортимент новыми марками в области коммерческих автомобилей и целевой группы «Автобусы». Вы можете доверять нашей компетентности: здесь гармонично сочетаются высокие параметры производительности, точность посадки и качество материала.

НАДЕЖНЫЙ ПАРТНЕР ДЛЯ ПРЕВОСХОДНОГО ТЕРМОМЕНЕДЖМЕНТА

BEHR HELLA SERVICE

Наш ассортимент в областях охлаждения двигателя и кондиционирования автомобиля отвечает всем требованиям к современной системе терморегуляции.

Тем самым Behr Hella Service предлагает исключительный пакет: благодаря нашему партнеру, фирме Behr, высочайшая компетентность предприятия-изготовителя объединяется с обширным ассортиментом изделий. Для дилеров и сервисных центров на вторичном рынке автозапчастей это выгодно тем, что глобальная логистическая сеть гарантирует постоянное наличие продукции. Кроме того, компания Behr Hella Service всегда готова оказать первоклассные сервисные услуги, а именно, комплексную поддержку продаж и высококачественное обслуживание. В общей сложности наше предложение охватывает более 7700 высококачественных изделий в области охлаждения двигателя, кондиционирования автомобиля и вентиляции/наддува. Благодаря этому, в распоряжении наших партнеров есть программа термоменеджмента, покрывающая все потребности и все серийно выпускаемые европейские и азиатские типы автомобилей.

НАШ АССОРТИМЕНТ В ОБЛАСТИ ТЕРМОМЕНЕДЖМЕНТА

Радиаторы системы охлаждения

Важнейшим компонентом системы охлаждения является радиатор охлаждающей жидкости. Он состоит из сердцевины радиатора и бачков радиатора со всеми необходимыми разъемами и элементами крепления. Тепло, образующееся в двигателе в результате сгорания топлива, поглощается охлаждающей жидкостью и отводится через радиатор наружу. Радиаторы охлаждающей жидкости устанавливаются в передней части автомобиля в месте забора воздушного потока.

Радиаторы наддувочного воздуха (Интеркулеры)

Увеличение мощности во всем диапазоне частот вращения двигателя, низкий расход топлива, повышение КПД двигателя, сокращение значений вредных выбросов, уменьшение тепловой нагрузки на двигатель – существует множество причин для охлаждения сгоревшего воздуха в двигателях с наддувом с помощью интеркулеров.

Вентиляторы Visco®

Для отвода тепла помимо мощных радиаторов необходимы также вентиляторы и приводы вентиляторов, которые особенно эффективно передают охлажденный воздух. Вентиляторы Visco® состоят из рабочей крыльчатки вентилятора и муфты Visco®. Они используются в двигателях с продольным расположением и размещаются по направлению движения транспортного средства перед радиатором.

Муфты Visco®

Муфта Visco® создает в зависимости от температуры силовое зацепление с крыльчаткой вентилятора и регулирует, тем самым, скорость ее вращения. Таким образом рабочий момент посредством неизнашивающего мокрого трения передается на крыльчатку вентилятора. В муфтах Visco® с электроприводом регулировка осуществляется напрямую через датчики. Вискомуфта в зависимости от потребностей оптимизирует уровень температуры охлаждающей жидкости, шум двигателя и расход топлива.

Теплообменники салона

Теплообменник салона расположен в салоне автомобиля под приборной панелью. Поток воздуха, создаваемый вентилятором салона, пропускается через теплообменник с горячим хладагентом, протекающим внутри него. Нагретый при этом воздух затем попадает в салон автомобиля.

Расширительные бачки

Расширительный бачок предназначен для сбора излишков, образующихся при расширении охлаждающей жидкости из контура системы охлаждения.

Масляные радиаторы

Масляные радиаторы/ масляные радиаторы трансмиссии призваны обеспечить почти неизменный температурный диапазон. Интервалы замены масла увеличиваются, и срок службы двигателя возрастает. Последняя модель от Behr — компактный и мощный масляный радиатор с демпфером. Поскольку у него отсутствует корпус охлаждения и он выполнен полностью из алюминия, он имеет малый вес и занимает небольшое место.

Водяные насосы

Водяной насос, как правило, имеет механический привод, перекачивает охлаждающую жидкость по контуру системы охлаждения, а также создает давление в системе. В большинстве случаев водяной насос соединяется с приводом посредством ремня.

Компрессоры

Компрессор, как правило, приводится в действие двигателем посредством клинового или поликлинового ремня. Он сжимает и перемещает хладагент по системе. Существуют различные конструкции компрессора. Хладагент в газообразном состоянии при низкой температуре поступает от испарителя и затем сжимается. Далее в газообразном состоянии, при высокой температуре и под высоким давлением он поступает в конденсатор.

Конденсаторы

Конденсатор предназначен для понижения температуры хладагента, нагреваемого в компрессоре при сжатии. Горячий хладагент в газообразном состоянии поступает в конденсатор отдавая тепло в окружающую среду. Вследствие охлаждения хладагент снова переходит в жидкое состояние: горячий газ поступает в верхнюю часть конденсатора. При прохождении по трубкам и пластинам отдает тепло в окружающую среду. В результате охлаждения хладагент поступает через нижний патрубок конденсатора в жидком состоянии.

Фильтры-осушитель

Фильтрующие элементы системы кондиционирования называют либо фильтрами-осушителями либо аккумуляторами, в зависимости от типа установки. Фильтр-осушитель служит для удаления из хладагента инородных частиц и влаги.

Расширительные/дроссельные клапаны

Расширительный клапан является границей раздела между областью высокого и низкого давления контура хладагента. Он устанавливается перед испарителем. Для достижения оптимального охлаждения в испарителе поток хладагента в зависимости от температуры регулируется при помощи расширительного клапана. Тем самым обеспечивается полное испарение хладагента, благодаря чему в компрессор попадает только хладагент в газообразном состоянии. Раширительные клапаны имеют разную конструкцию.

ВАШИ ПРЕИМУЩЕСТВА

Однозначная дифференциация качества.

Больше ясности благодаря информативности маркировки товара.

Повышение удовлетворенности клиентов.

Благодаря понятной классификации товаров не остается никаких сомнений в том, что находится в коробке.

Выигрывайте без каких-либо существенных затрат.

Номера артикулов, качество изделий, уровень цен и сервис остаются неизменными.

У Вас есть выбор!

В любом случае у Вас по-прежнему остается альтернатива: премиум или стандарт.

Воспользуйтесь высоким уровнем сервиса для всех товаров.

Подробную информацию можно найти на:

www.behrhellaservice.com/premiumline

ПО МАРКИРОВКЕ СНАРУЖИ ЛЕГКО ОПРЕДЕЛИТЬ СОДЕРЖИМОЕ УПАКОВКИ.

Наша новая концепция брендинга предлагает Вам сегодня еще больше четкости: благодаря новым маркировкам различия между охватываемыми более 4500 позиций изделиями PREMIUM LINE и стандартными изделиями становятся еще более очевидными.

Позиции, которые прежде обозначались как „Version Alternative“ (альтернативная версия), теперь, аналогично программе стандартных изделий, имеют логотип Behr Hella Service и никакого другого дополнительного обозначения. Благодаря этому с первого взгляда видно, о каком продукте (PREMIUM LINE или стандарт) идет речь.

ДВА СЕГМЕНТА ИЗДЕЛИЙ

ЗДЕСЬ МОЖНО НАЙТИ ПОДХОДЯЩИЙ ТОВАР НА ЛЮБОЙ ВКУС

Хладопроизводительность при нормальных условиях

У стандартных изделий: достаточная производительность при нормальных условиях.

Никакой разницы между Standard и Premium Line

Хладопроизводительность при экстремальных условиях

У премиум-продуктов: несколько более высокие резервы производительности при экстремальных условиях (например, жаркое лето, полная нагрузка). Расход топлива может слегка снизиться, так как при экстремальных условиях поддержка вентиляторов, если необходимо, запускается позднее

Долговечность

Экономичное решение с великолепным соотношением "цена-качество"

Обеспечение долговечности в течение всего жизненного цикла автомобиля

Широта ассортимента

Стандартная программа с широким покрытием автомобильных марок, представляющая собой базу ассортимента (более 3100 позиций)

Производство компаний Behr, AKG, Visteon, а также других конвейерных поставщиков (более 4500 позиций)

Доступность продукции

Все товары Behr Hella Service имеют высокий уровень наличия для заказа

Сервис

Гарантия всех важных сервисных услуг, включая поддержку продаж, технический сервис и т.д.

**BEHR HELLA PREMIUM LINE –
идеальное решение для клиентов, стремящихся к лучшему.**

Как в TecDoc, так и в будущих печатных каталогах изделия серии Premium Line будут четко представлены как таковые. Как на самом изделии, так и на стикере коробки выполняется ясная маркировка принадлежности изделия к серии Premium Line. Такое четкое наружное разграничение ясно указывает на различие линеек продукции по содержанию. Этот переход будет осуществляться постепенно с начала 2017 года.
