Product Description

1. The crimped plate serves to fasten the air-spring bellow to the vehicle's frame.
2. The bumper restrict the air spring stroke and ensures the emergency operation properties.
3. The actual springing element, i.e., an air-spring bellow, consists of: internal reinforcement material, stabilizing brackets and external covering.
4. The clamping plate produces a connecting link between the air-spring and piston; which can either be vulcanized on, or constructed as a true clamping element, according to the item.
5. The piston produces a connection between the air-spring and axle.

WARNING!

The air spring may only be pressurized in fitted state. Operation only in the vehicle's air suspension system or in suitable device. Do not apply more than 7 bar in pressure.Risk of İnjury!

Installation Instruction

- The best way to change an air spring is to use a complete system and to exchange axle wise.
- Here we Show as an example how to Exchange an Air Spring System on a truck rear axle.
- Please alwas refer to the mounting instructions of your vehicle manufacturer

- Always secure your vehicle first and make sure it remains stable during the entire process
- Deflate your Air Spring and keep the air pressure system and the ignition completely switched off.
- Attention: The distance between chassis and ground will be reduced

- First loosen all screws connecting the Air Spring System to the chassis
- Then loosen all screws connecting the Air Spring System to the axle
- Remove the defect air spring system .
- Clean the faying surface and look for corrosion
- Keep the air pipe closed against dirt or dust at all times

- Check for abrasion, embrittlement and cracks in the rubber parts
- Check metal parts for corrosion.
- Check plastic parts for capillary cracks .
- Check for possible contamination by lubricants such as oili, diesel , brake or cooling fluids.
- Remove all foreign objects such as Stones or dirt
- Romeve all liquids and check source of comtamination

- Install new Air Spring System between chassis and axle and insert
- Screws (news ones if the old ones are corroded or the threads are worn down).
- Tighten the top plate to the chassis first
- Attention: make sure you use the correct torque which is recommended by your vehicle manufacturer or in this catalogue
- Leave the air inlet open

- Pull down the piston until it touches the mounting plate (if necessary us efor a compressed air gun with max 0,3 bar)
- Compulsively comply with the height limit
- Now fighten the piston to the axle with a torque key making sure to use the correct torque recommended by your vehicle manufacturer or in this catalouge

- Connect pneumatic valve with the air inlet of the new air spring also with the recommended torque.
- İnflate your Air spring with the recommended working pressure , release the safety catch of your vehicle and put it back into driving position.
- Drive on the safer side with ouality
