Fresh Air Comes Naturally with a DENSO Cabin Air Filter

When travelling by car it's vital to know that the air you're breathing in is pure and clean. To eliminate the smells, irritants and pollution that could enter your car from the road, you need a Cabin Air Filter you can trust.

OE quality

DENSO's Cabin Air Filters offer aftermarket customers a wide range of filters designed and manufactured to the highest possible standard – the same Original Equipment (OE) quality that vehicle manufacturers choose for their new cars.

HVAC know-how

As the world's number one OE developer of Heating, Ventilation and Air Conditioning (HVAC) systems, and the world's second largest automotive components brand, DENSO really understands Cabin Air Filter technology.

HVAC system

Choice

Engineered to OE standards DENSO's Cabin Air Filter programme offers:

- > 312 part numbers
- > More than 700 applications
- > 90% coverage of the European and Asian car parcs.

Particle and Combination filter technology

The DENSO programme includes both Particle Filters and Combination Filters. Our multi-layer filtration systems work to neutralise exhaust gases and other pollutants whilst trapping and holding pollen and dust particles, ensuring air reaching the cabin is clean and safe to breathe. Each air filter reference is individually designed to suit the needs of different vehicles types. What's more, DENSO filters work without causing a drop in air pressure that could potentially damage a vehicle's HVAC systems.

Offering outstanding protection, quality, technology and choice, DENSO Cabin Air Filters add up to a better driving experience.

Better by Design

Quality matters

Without effective cabin air filtration motorists and their passengers can be affected by a variety of potentially harmful air pollutants entering the comfort zone of their car. Pollutants can include dust, soot, pollen, noxious gases and abrasion particles from brakes and tyres. If not eliminated, these can affect eyes, nose and lungs – causing health problems, irritation and discomfort.

Because DENSO Cabin Air Filters offer state-of-the-art, OE quality they address the problem of in-car pollution extremely effectively. They are also subject to our stringent quality control procedures at every stage of production. That not only means a more comfortable driving experience, but better protection against health hazards.

Car Air-Flow

Superior Technology

DENSO's understanding of HVAC systems means our Cabin Air Filters feature advanced filter technology to ensure a healthier in-car environment. The fleece material we use contains up to five individual layers which trap almost 100% of harmful pollutants and particles, holding them well away from the vehicle interior where they cannot be breathed in. DENSO filters have extremely accurate fitting mechanisms sealing the filter to the housing, increasing filtration efficiency. Their efficient design also protects the HVAC system, benefiting the health of every passenger, and people with allergies

Cabin Air Filter | Filter Types & Replacement

GB

Filter Types

Particle Filters

Particle Filters from DENSO offer exceptional protection from dust, soot, pollen and particles. Featuring multi-layer fleece material to efficiently remove dust and solid matter, they also have a large dust holding capacity and minimise air flow resistance.

Particle Filters

Combination Filters

DENSO Combination Filters offer all of the blocking, electrostatic and nanofibre technologies of our Particle Filters; trapping almost 100% of dust, pollen and solid particles before they can be inhaled.

But thanks to an additional, activated charcoal layer located inside the filtration material our Combination Filters offer an added advantage.

The result is a cabin atmosphere that always stays fresh, pleasant and healthy to breathe.

Combination Filters

How do they work?

- > **Removal by blocking** – particles are prevented from entering the cabin by a close meshed, non-woven filter layer. Particles trapped are then deposited into the filter housing
- > **Removal by electrostatics** – small particles with permanent or temporary charges are attracted and held back by electrostatic interaction.
- > **Nanofibre coatings** – A layer of fine fibres is spun into the filter media, preventing pressure drop.

Replacement

Although most of today's new vehicles are already fitted with Cabin Air Filters, over time the filter becomes clogged with dust and dirt that can eventually be infected by bacteria, mildews and micro-organisms. This makes the filter a potential source of allergens as well as reducing filtration effectiveness and electrostatic charge. There can even be an increase in pressure drop, stressing the HVAC system.

To maintain a fresh, safe in-car environment DENSO recommends replacing the Cabin Air Filter at least once a year, every 10,000 – 15,000 km, or as specified by the vehicle manufacturer, whatever comes first. Only regular replacement ensures the continued filtration efficiency and good HVAC performance that guarantee a more hygienic, comfortable car interior.

New filter

Filter after 15.000 km

Replacement Sense

- > **Get ready for demand** - More than 80% of all European passenger cars are already fitted with Cabin Air Filters, and the trend is rising. This makes timely part replacement an increasingly important and high volume responsibility for the aftermarket.
- > **Health education** - Drivers are rarely aware of the importance of regular Cabin Air Filter replacement – or the consequences of delay. Take time to educate your customers. Prompt action will help to protect their own health, and the well-being of their passengers.
- > **In city and country** - Solid matter, particles, noxious gases and unpleasant smells affect rural as well as urban areas, making Cabin Air Filter replacement important in any environment.

Frischlucht ist mit Fahrgastraum-Luftfiltern von DENSO selbstverständlich

Bei Autofahrten muss man sich unbedingt darauf verlassen können, daß die eingeatmete Luft frisch und rein ist. Damit von außen keine Gerüche, Reizstoffe und Fremdkörper ins Fahrzeuginnere eintreten können, wird ein Fahrgastraum-Luftfilter benötigt, auf den Verlass ist.

OE-Qualität

DENSO bietet Kunden im Aftermarket ein breites Spektrum von Fahrgastraum-Luftfiltern, die alle gemäß höchsten Standards entwickelt und produziert werden – in der gleichen Originalausrüstungsqualität (OE), wie sie von Fahrzeugherstellern für Neufahrzeuge spezifiziert wird.

Expertise im Bereich HLK

Weltweit führend in der Entwicklung von Heizungs-, Lüftungs- und Klimaanlage systemen (HLK) und als weltweit zweitgrößter Zulieferer von automotiven Markenprodukten verfügt DENSO über ein umfassendes Verständnis der Technologie, die für Fahrgastraum-Luftfilter eingesetzt werden muss.

DENSO Fahrgastraum-Luftfiltern

HLK-systeme

Auswahl

Entsprechend OE-Standards gefertigt, bietet das Fahrgastraum-Luftfilterprogramm von DENSO:

- > 312 Artikelnummern
- > Mehr als 700 Anwendungsfälle
- > 90%ige Abdeckung für europäische und asiatische Fahrzeuge

Die Technologie der Partikel- und Kombifilter

DENSO hat sowohl Partikelfilter wie auch Kombifilter in seinem Programm. Unser mehrlagiges Filtrationssystem arbeitet dergestalt, dass Abgase und andere Schadstoffe neutralisiert werden, während Pollen und Staubpartikel abgefangen und festgehalten werden, was gewährleistet, dass die ins Fahrzeug eintretende Luft frisch und rein ist und ohne gesundheitliche Beeinträchtigung eingeatmet werden kann. Jedes Filtermodell ist spezifisch darauf ausgelegt, den Erfordernissen des zugehörigen Fahrzeugtyps zu entsprechen. Und außerdem setzen Filter von DENSO dem Luftstrom keinen Widerstand entgegen, was sonst möglicherweise zu Schäden am HLK-System eines Fahrzeugs führen könnte.

Fahrgastraum-Luftfilter von DENSO bieten ein hervorragendes Maß an Schutzwirkung, Qualität, Technologie und Wahlmöglichkeit und verbessern damit das Fahrerlebnis insgesamt.

Besseres Design

Qualität zählt

Ohne effektive Filtration der in das Fahrzeuginnere eintretenden Luft, sind Fahrer und Beifahrer möglicherweise schädlichen Luftverunreinigungen ausgesetzt, die in den Komfortbereich des Fahrzeugs Eingang finden. Hierzu können Staub, Ruß, Pollen, schädliche Gase und Abriebteilchen von Bremsbelägen und Reifen gehören. Ohne Filterung können diese in Augen, Nase und Lungen gelangen – und damit gesundheitliche Probleme, Reizungen und Unbehagen hervorrufen.

Da Fahrgastraum-Luftfilter von DENSO OE-Qualität bieten, lösen sie das Problem der Luftverschmutzung im Fahrzeuginnere mit hoher Wirksamkeit. Und da strikte Qualitätskontrollen in jedem Produktionsstadium zum Einsatz gelangen, wird nicht nur das Fahrerlebnis komfortabler, sondern zugleich die Gesundheit in höherem Maße geschützt.

Auto - Luftstrom

Überlegene Technologie

Das Knowhow von DENSO auf dem Gebiet der HLK-Systeme bringt mit sich, dass unsere Fahrgastraum-Luftfilter mit einer fortschrittlichen Filtrationstechnologie arbeiten, die ein gesundes Innenraumklima gewährleistet. Das von uns verwendete Faserschichtmaterial besteht aus bis zu fünf Einzelschichten, die beinahe 100 % der schädlichen Verunreinigungen und Partikel abfangen, und vom Fahrgastraum entfernt anlagern, wo sie nicht eingeatmet werden können. Filter von DENSO besitzen extrem genau ausgeführte Passungen, die eine Abdichtung des Filters mit dem Filtergehäuse bieten und damit die Wirksamkeit der Filtration erhöhen. Ihr effizientes Design schützt zudem das HLK-System, was der Gesundheit aller Fahrzeuginsassen zugute kommt, insbesondere von Personen, die an Allergien oder Asthma leiden.

Filterarten

Partikelfilter

Partikelfilter von DENSO bieten herausragenden Schutz vor Staub, Ruß, Pollen und Schwebstoffen. Für die effektive Filtration von Staub und Festkörperteilchen arbeiten diese Filter mit einem mehrlagigen Faserschichtmaterial, sind in der Lage, große Staubmengen zurückzuhalten und setzen dem Luftstrom ein Mindestmaß an Widerstand entgegen.

Partikelfilter

Kombifilter

Kombifilter von DENSO arbeiten ebenfalls mit Entfernung durch Rückhaltung und elektrostatische Interaktion sowie einer Nanofaser-Beschichtung - wie unsere Partikelfilter - und halten damit fast 100% an Staubeilchen, Pollen und Festkörperteilchen zurück, ehe diese eingeatmet werden können.

Aber dank einer zusätzlichen Lage Aktivkohle im Filtermedium bieten unsere Kombifilter einen weiteren Vorteil: Sie eliminieren auch unschöne - und oft schädliche - Gerüche und Gase.

Ergebnis ist ein Innenraumklima, das jederzeit frisch und angenehm ist und ohne gesundheitliche Beeinträchtigung eingeatmet werden kann.

Kombifilter

Wie funktioniert es?

- > **Entfernung durch Rückhaltung** - Partikel werden durch eine feinmaschige Faservlieslage daran gehindert, in den Fahrgastraum einzutreten. Die zurückgehaltenen Partikel werden dann im Filtergehäuse abgelagert.
- > **Entfernung durch Elektrostatik** - Kleinstpartikel mit permanenter oder zeitweiliger Aufladung werden angezogen und durch elektrostatische Interaktion zurückgehalten.
- > **Nanofaser-Beschichtung** - Eine Lage sehr feiner Fasern ist in das Filtermedium eingewirkt und verhindert einen Druckabfall über den Filter.

Austausch

Die meisten heutigen Neufahrzeuge sind schon mit Fahrgastraum-Luftfiltern ausgerüstet. Im Laufe der Zeit setzen sich diese Filter mit Staub und Schmutz zu, worauf sich schließlich Bakterien, Schimmel und andere Mikroorganismen ansiedeln. Damit wird ein solcher Filter zur Quelle möglicher Allergene, seine Filtrationswirksamkeit wird herabgesetzt, seine elektrostatische Aufladung nimmt ab. Zudem kann er dem Luftstrom höheren Widerstand entgegensetzen - und Druckabfälle über den Filter belasten das HLK-System.

Um frisches und sicheres Klima im Fahrzeuginneren aufrechtzuerhalten, empfiehlt DENSO, den Fahrgastraum-Luftfilter zumindest einmal jährlich, alle 10.000 - 15.000 km oder gemäß Angaben des Fahrzeugherstellers auszutauschen. Nur der regelmäßige Austausch stellt anhaltende Filtrationswirksamkeit und gute Leistung des HLK-Systems sicher, was bessere Hygiene und höheren Komfort im Fahrgastraum gewährleistet.

Neuer Filter

Filter nach 15.000 km

Austausch macht Sinn

- > **Bereiten Sie sich auf die Nachfrage vor** - Mehr als 80 % aller europäischen Personenkraftwagen sind mit Fahrgastraum-Luftfiltern ausgerüstet - Tendenz steigend. Damit wird der zeitgerechte Teileaustausch zu einer stetig wichtigeren und zu einer hohen Volumen repräsentierenden Verantwortlichkeit für den Aftermarket.
- > **Gesundheitsberatung** - Autofahrer sind sich selten der Wichtigkeit eines regelmäßigen Austauschs von Fahrgastraum-Luftfiltern bewusst - geschweige denn der Konsequenzen zu langer Wechselintervalle. Nehmen Sie sich die Zeit Ihre Kunden zu beraten. Promptes Handeln hilft, deren eigene Gesundheit und das Wohlbefinden ihrer Passagiere zu schützen.
- > **In der Stadt ebenso wie auf dem Land** - Feststoffe, Partikel, schädliche Gase und unangenehme Gerüche kommen in der Stadt ebenso wie auf dem Land vor und machen den Austausch von Fahrgastraum-Luftfiltern unabhängig vom Einsatzumfeld des Fahrzeugs wichtig.

L'air frais circule tout naturellement avec un filtre habitacle DENSO

Lorsque vous circulez en voiture, il est essentiel de savoir que l'air que vous respirez est pur et sain. Afin d'éliminer les odeurs, les irritants et les polluants de la route susceptibles de s'infiltrer dans votre voiture, vous avez besoin d'un filtre habitacle efficace.

Qualité d'équipement d'origine

Les filtres habitacle DENSO proposent aux acteurs du marché de la rechange toute une série de filtres habitacle conçus et fabriqués selon les normes extrêmement élevées – la même qualité d'équipements d'origine que celle choisie par les constructeurs automobiles pour leurs véhicules neufs.

Savoir-faire en matière de groupes de climatisation (HVAC)

En tant que numéro un mondial en matière de développement d'équipements d'origine des systèmes HVAC (Chauffage, ventilation et climatisation), et en tant que deuxième équipementier automobile mondial, DENSO maîtrise parfaitement toute la technologie des filtres habitacle.

DENSO filtre habitacle

Groupe de climatisation (HVAC)

Vaste choix

Conçue selon les normes d'équipements d'origine, la gamme de filtres habitacle DENSO propose :

- > 312 références
- > Plus de 700 applications
- > 90% de couverture des parcs automobiles européens et asiatiques.

Technologie des filtres à particules et combinés

La gamme DENSO comprend des filtres à particules et des filtres combinés. Nos systèmes de filtration multicouches permettent de neutraliser les gaz d'échappement et autres polluants tout en piégeant et en retenant les pollens et les particules de poussière, ce qui garantit que l'air arrivant dans l'habitacle est pur et sain à respirer. Chaque référence de filtre à air est conçue individuellement pour répondre aux besoins des différents types de véhicules. De plus, les filtres DENSO fonctionnent sans provoquer de chute de pression de l'air ce qui risquerait, éventuellement, d'endommager les systèmes HVAC du véhicule.

Présentant une protection, une qualité, une technologie et un choix exceptionnels, les filtres à air d'habitacle DENSO contribuent à améliorer votre sensation de conduite.

Priorité à la conception

Qualité irréprochable

Sans une filtration efficace de l'air de l'habitacle, les automobilistes et les passagers risquent d'être affectés par toute une variété de polluants de l'air potentiellement nocifs, qui s'infiltreront dans la zone de confort de leur voiture. Parmi ces polluants, se retrouvent de la poussière, de la suie, des pollens, des gaz toxiques et des particules d'abrasion provenant des freins et des pneus. S'ils ne sont pas éliminés, ceux-ci risquent d'affecter les yeux, le nez et les poumons, et de provoquer des problèmes de santé, des irritations et des maux de tête.

Les filtres habitacle DENSO, résultats concrets d'une qualité OE à la pointe de la technologie, règlent de façon extrêmement efficace le problème de la pollution dans le véhicule. Ils sont aussi soumis à nos procédures de contrôle qualité rigoureuses à chaque stade de la production. Résultat : non seulement une sensation de conduite dans un confort supérieur, mais une meilleure protection contre les risques de santé.

Courant d'air

Technologie supérieure

Grâce à la maîtrise par DENSO des systèmes HVAC, filtres habitacle bénéficient d'une technologie de filtration avancée afin de garantir un environnement plus sain dans le véhicule. Le média utilisé se compose d'un maximum de cinq couches individuelles qui piègent pratiquement 100% des polluants et des particules nocifs, les retenant à l'écart de l'habitacle où ils ne seront pas respirés. Les filtres DENSO sont livrés avec des mécanismes de pose extrêmement précis qui rendent étanche le filtre sur le boîtier, augmentant donc la performance de la filtration. Leur conception judicieuse sauvegarde aussi le système HVAC, protégeant la santé de tous les passagers et en particulier, de tous ceux qui souffrent d'allergies et d'asthme.

Types de filtre

Filtres à particules

Les filtres à particules DENSO offrent une protection exceptionnelle contre la poussière, la suie, le pollen et les particules. Composés d'un media multicouches afin d'éliminer efficacement les poussières et les corps solides, ils présentent aussi une grande capacité de retenue des poussières et minimisent la résistance au flux d'air.

Filtres à particules

Filtres combinés

Les filtres combinés DENSO réunissent toutes les technologies : blocage, électrostatique et nanofibres de nos filtres à particules. Ils piègent près de 100% de poussière, pollens et particules solides avant que ceux-ci ne soient inhalés.

Grâce à une couche de charbon actif supplémentaire située à l'intérieur de la matière de filtration, nos filtres combinés présentent un avantage supérieur. Ils éliminent aussi les gaz et les odeurs désagréables et souvent nocifs.

Il en résulte dans l'habitacle une atmosphère qui reste toujours fraîche, agréable et saine à respirer.

Filtres combinés

Comment fonctionnent-ils?

- > **Élimination par blocage** : une couche de filtrage non tissé à mailles serrées empêche les particules de s'infiltrer dans l'habitacle. Les particules piégées se déposent alors dans le boîtier du filtre.
- > **Élimination par électrostatisme** – les petites particules à charges permanentes ou temporaires sont attirées et retenues par interaction électrostatique.
- > **Enduits de nanofibres** – une couche de fibres fines est tissée dans le media de filtration, afin d'empêcher une chute de pression.

Remplacement

Bien que la plupart des véhicules neufs actuels soient déjà équipés de filtres habitacle, au fil du temps, le filtre risque de se colmater de poussières et d'impuretés qui peuvent en dernier ressort être infestés de bactéries, moisissures et micro-organismes. Ceci fait du filtre une source potentielle d'allergènes et peut aussi réduire l'efficacité de la filtration et les charges électrostatiques. Il peut se produire une chute de pression plus importante imposant des contraintes sur le groupe de climatisation.

Pour maintenir un environnement frais et sûr dans l'habitacle, DENSO recommande de remplacer le filtre habitacle au moins une fois par an, tous les 10 000 à 15 000 km, ou aux intervalles prescrits par le constructeur automobile. Ce n'est qu'en le remplaçant à intervalles réguliers que peuvent être garanties l'efficacité de la filtration continue, et la bonne performance du groupe de climatisation, et donc un habitacle plus hygiénique et plus confortable.

Filtre neuf

Filtre au bout de 15 000 km

Logique du remplacement

- > **Préparez-vous à répondre à la demande** – Plus de 80% de toutes les voitures de tourisme européennes sont déjà équipées de filtres habitacle, et cette tendance va continuer à augmenter. Par conséquent, pour le marché de la rechange, le remplacement des filtres constitue une opportunité de plus en plus intéressante et un volume potentiel important.
- > **Éducation sanitaire** – Les conducteurs sont rarement informés de l'importance que joue le remplacement régulier des filtres habitacle, ou des conséquences d'un retard dans ce remplacement. Prenez le temps de l'expliquer à vos clients. Un remplacement effectué à temps contribuera à protéger leur santé et celle de leurs passagers.
- > **En ville et à la campagne** – Corps solides, particules, gaz nocifs et mauvaises odeurs affectent l'environnement rural ainsi que l'environnement urbain, ce qui fait qu'il est important de remplacer les filtres habitacle dans n'importe quel environnement.

E

El aire fresco entra naturalmente con un filtro de habitáculo DENSO

Cuando se viaja en automóvil, es vital saber que el aire que se respira es puro y limpio. Para eliminar los olores, las partículas irritantes y la contaminación que pueden entrar desde la carretera, conviene usar un Filtros de habitáculo fiable.

Calidad original

DENSO ofrece a los clientes una gama de filtros de cabina creados y fabricados según las normas más exigentes y con la misma calidad que los fabricantes de vehículos escogen para sus nuevos automóviles.

Tecnología de HVAC

Porque es el principal fabricante mundial de sistemas de calefacción, ventilación y aire acondicionado (HVAC), y la segunda marca más importante del mundo de componentes para la industria automotriz, DENSO conoce muy bien la tecnología de Filtros de aire para cabina.

Sistema de la HVAC

Selección

El programa de Filtros de aire de cabina DENSO, creado conforme a los estándares originales ofrece:

- > 312 referencias
- > Más de 700 aplicaciones
- > Una cobertura del 90% para los vehículos en circulación en Europa y Asia

Tecnología de filtros de partículas y de combinación

El programa DENSO comprende tanto filtros de partículas como de combinación. Nuestros sistemas de filtración por numerosas capas neutralizan los gases de escape y otros contaminantes al tiempo que atrapan y retienen el polen y las partículas de polvo, asegurando así que el aire que entra en el habitáculo sea limpio y seguro para respirar. Cada referencia del Filtros de habitáculo se diseña individualmente para que responda a los requisitos de los distintos tipos de vehículos. Es más: los filtros DENSO funcionan sin producir ningún descenso de la presión del aire que podría quizá dañar los sistemas de HVAC del vehículo.

Porque ofrecen protección, calidad, tecnología y elección sobresalientes, los Filtros de aire de cabina DENSO contribuyen a que la experiencia de conducir sea aún mejor.

Mejor por diseño

La calidad importa

Sin una filtración de aire eficaz, los conductores y sus pasajeros pueden verse afectados por diversos contaminantes atmosféricos peligrosos en potencia que invaden la comodidad de su vehículo. Dichos contaminantes pueden ser polvo, hollín, polen, gases nocivos o partículas abrasivas de frenos y llantas. Si no se eliminan, esas partículas pueden afectar ojos, nariz y pulmones y ocasionar problemas de salud, irritación y molestias.

Al ofrecer la más moderna calidad de los equipos originales, los filtros de cabina DENSO resuelven el problema de la contaminación en el coche de manera eficazísima. También les sometemos a nuestros estrictos procedimientos de control de calidad en cada fase de la producción, lo que significa no solo una experiencia de conducción más cómoda sino una protección mejor ante los peligros contra la salud.

Flujo de aire

Tecnología superior

El que DENSO conozca a fondo los sistemas HVAC significa que nuestros Filtros de aire de cabina cuentan con una avanzada tecnología de filtrado que asegura un ambiente más higiénico en el automóvil. El material lanoso que usamos consta de hasta cinco capas distintas que atrapan casi el 100% de partículas y contaminantes nocivos, manteniéndolos fuera del interior del vehículo, donde no se puedan respirar. Los filtros DENSO tienen unos mecanismos de colocación sumamente precisos que sellan el filtro en su almacén, aumentando la eficacia de la filtración. Asimismo, su eficiente diseño protege los sistemas de HVAC para bien de todos los pasajeros, sobre todo de quienes sufren alergias y asma.

E

Tipos de filtro

Filtros de partículas

Los filtros de partículas DENSO ofrecen una protección excepcional contra polvo, hollín, polen y partículas. Su material compuesto de lana de muchas capas elimina con eficacia el polvo y la materia sólida, tiene gran capacidad para retener el polvo y minimizar la resistencia al flujo de aire.

Filtros de partículas

Filtros combinados

Los filtros combinados DENSO ofrecen todas las tecnologías de bloqueo, electrostática y de nanofibras de nuestros Filtros de partículas, capturando casi el 100% del polvo, polen y partículas sólidas antes de poderlas inhalar.

Pero gracias a una capa adicional de carbon vegetal activado, situada dentro del material filtrante, nuestros filtros combinados ofrecen una ventaja extra.

El resultado es que el ambiente del habitáculo está siempre fresco y agradable y es sano para respirar.

Filtros combinados

¿Cómo funcionan?

- > **Eliminación por bloqueo** – una capa de filtro no tejida de malla tupida, evita que las partículas entren en el habitáculo. Las partículas retenidas se depositan luego en el armazón del filtro.
- > **Eliminación por sistema electrostático** – pequeñas partículas con cargas permanentes o temporales son atraídas y retenidas por interacción electrostática.
- > **Recubrimientos de nanofibra** – En el interior del filtro se hilaba una capa de fibras finas que evitan que la presión caiga.

Sustitución

Aunque la mayoría de los vehículos actuales ya cuentan con filtros de polen, con el tiempo el filtro queda lleno de polvo y suciedad y puede estar infestado de bacterias, hongos y microorganismos, hasta convertirse en una fuente posible de alérgenos, además de reducir la eficacia de la filtración y la carga electrostática. Incluso puede aumentar la caída de la presión, forzando el sistema de HVAC.

Para que el ambiente en el automóvil se mantenga fresco y seguro, DENSO recomienda cambiar el filtro al menos una vez al año, cada 15 000 km. o según lo especifique el fabricante del vehículo. Sólo con un cambio periódico se puede asegurar la eficacia continua de la filtración y el buen resultado del HVAC, lo que garantiza un interior del automóvil más cómodo e higiénico.

Filtro nuevo

Filtro después de 15 000 km.

Cambiar es de sentido común

- > **Prepárese para la demanda que se avecina** – Más del 80% de todos los vehículos europeos de pasajeros ya cuentan con Filtros de aire de habitáculo y la tendencia va en aumento. Esto hace que el recambio de piezas oportuno sea una responsabilidad cada vez más importante y de gran volumen para el mercado posventa.
- > **Educación en higiene** – Los conductores rara vez se fijan en la importancia de cambiar periódicamente el Filtros de habitáculo de cabina– o de las consecuencias de retrasarlo. Dedique tiempo a educar a sus clientes. Una acción oportuna contribuirá a proteger la salud y el bienestar de sus pasajeros.
- > **En la ciudad y en el campo** – Las materias y partículas sólidas, los gases nocivos, los malos olores afectan lo mismo las zonas rurales que las urbanas, por lo que es importante cambiar el Filtros de habitáculo de cabina.

PL

Świeże powietrze dopływa naturalnie z filtra kabinowego DENSO

Podczas jazdy samochodem ważna jest świadomość, że wdychane powietrze jest czyste. Aby wyeliminować nieprzyjemne zapachy, substancje drażniące i zanieczyszczenia, które mogłyby przedostać się do wnętrza samochodu, potrzebujesz filtra powietrza, któremu możesz ufać.

Jakość oryginalnego wyposażenia

Kabinowe filtry powietrza DENSO oferują klientom z rynku wtórnego szeroki asortyment filtrów zaprojektowanych i wyprodukowanych zgodnie z najwyższymi możliwymi normami – jakością OE, czyli taką, jaką wybierają producenci samochodów dla swoich nowych pojazdów.

Wiedza technologiczna HVAC

DENSO, będąc liderem OE w dziedzinie systemów ogrzewania, wentylacji i klimatyzacji (HVAC) i drugą na świecie marką części dla przemysłu motoryzacyjnego, naprawdę rozumie technologię kabinowych filtrów powietrza.

Kabinowy filtr powietrza DENSO

system ogrzewania, wentylacji i klimatyzacji

Wybór

Zaprojektowany zgodnie z normami oryginalnego wyposażenia (OE) program kabinowych filtrów powietrza DENSO zapewnia:

- > 312 pozycji katalogowych
- > ponad 700 zastosowań
- > 90% pokrycie rynku motoryzacyjnego w Europie i Azji

Technologia filtrów standardowych i filtrów z węglem aktywnym

Program DENSO obejmuje zarówno filtry standardowe, jak i filtry z węglem aktywnym. Nasze wielowarstwowe systemy filtracyjne neutralizują spaliny i inne zanieczyszczenia, zatrzymując jednocześnie pyłki kwiatowe i cząsteczki kurzu. Powietrze, które dostaje się do kabiny jest czyste i można nim bezpiecznie oddychać. Każda pozycja katalogowa jest indywidualnie zaprojektowana pod kątem potrzeb różnych typów pojazdów. Co więcej, w filtrach DENSO nie następuje spadek ciśnienia powietrza, który jest potencjalnie niebezpieczny dla systemów HVAC pojazdu. Kabinowe filtry powietrza DENSO, oferując wyjątkową ochronę, jakość, technologię i wybór, przyczyniają się do podwyższenia jakości jazdy.

Lepszy projekt

Aspekty jakości

Bez skutecznej filtracji powietrza doprowadzanego do kabiny, kierowca i jego pasażerowie mogą być narażeni na różne potencjalnie szkodliwe zanieczyszczenia powietrza, które przedostają się do strefy komfortu pojazdu. Zanieczyszczenia mogą występować w postaci kurzu, pyłków kwiatowych, trujących gazów i cząstek powstałych w wyniku ścierania się okładzin hamulcowych i opon. Substancje te, jeśli nie zostaną wyeliminowane, mogą działać na oczy, nos i oskrzela, powodując problemy zdrowotne, podrażnienia i poczucie braku komfortu.

Kabinowe filtry powietrza DENSO oferują najnowocześniejsze rozwiązania jakości oryginalnego wyposażenia (OE), więc rozwiązują problemy związane z zanieczyszczeniami we wnętrzu samochodu wyjątkowo skutecznie. Podlegają również naszym surowym procedurom kontroli jakości na każdym etapie produkcji. Oznacza to nie tylko większy komfort jazdy, ale także lepszą ochronę przed zagrożeniami zdrowotnymi.

strumień powietrza w pojeździe

Najwyższy poziom technologiczny

Wiedza DENSO w dziedzinie systemów HVAC oznacza, że nasze kabinowe filtry powietrza korzystają z zaawansowanej technologii w celu zapewnienia zdrowszego środowiska we wnętrzu samochodu. Używane przez nas włókna składają się z maksymalnie 5 warstw, które zatrzymują prawie 100% szkodliwych zanieczyszczeń i cząstek stałych, niedopuszczając, aby trafiły one do wnętrza pojazdu a następnie przedostały się do płuc pasażerów. Filtry DENSO mają wyjątkowe precyzyjne mechanizmy montażowe, które zapewniają szczelność między filtrem a obudową, zwiększając sprawność filtracji. Wydajna konstrukcja chroni również system HVAC, wpływając korzystnie na zdrowie każdego pasażera, a szczególnie osób cierpiących na uczulenia i astmę.

PL

Typy filtrów

Filtry standardowe

Filtry standardowe z firmy DENSO oferują wyjątkową ochronę przed kurzem, sadzą, pyłkiem kwiatowym i cząstkami stałymi. Filtry, wyposażone w wielowarstwową włókninę w celu skutecznej eliminacji kurzu i cząstek stałych, charakteryzują się bardzo dużą pojemnością i minimalnym oporem przepływu powietrza.

Filtry standardowe

Filtry z węglem aktywnym

Filtry z węglem aktywnym DENSO wykorzystują wszystkie technologie blokowania, elektrostatyczne i oparte na nanowłóknach, stosowane w naszych filtrach standardowych, zatrzymując prawie 100% kurzu, pyłków kwiatowych i cząstek stałych i niepuszczając, aby dostały się do układu oddechowego.

Dzięki uzupełniającej warstwie węgla aktywnego we wkładzie filtra, nasz filtr z węglem aktywnym oferuje dodatkowe korzyści.

Filtr powoduje, że atmosfera w kabinie jest zawsze świeża, przyjemna i zdrowa.

Filtry z węglem aktywnym

Sposób działania filtrów

- > **Eliminacja przez blokowanie** – cząstki, zanim dostaną się do kabiny, zatrzymywane są przez zwartą gęstą warstwę włókniny. Zatrzymane cząstki gromadzone są w obudowie filtra.
- > **Eliminacja elektrostatyczna** – małe cząsteczki o stałym lub tymczasowym ładunku elektrycznym są przyciągane i zatrzymywane w wyniku działania sił elektrostatycznych.
- > **Powłoka z nanowłókien** – warstwa cienkich włókien nawinięta na wkład filtra zapobiega spadkowi ciśnienia.

Wymiana

Mimo że większość współczesnych nowych samochodów jest już wyposażona w kabinowe filtry powietrza, z upływem czasu filtr zapycha się kurzem i zanieczyszczenia w filtrze mogą zostać zaatakowane przez bakterie, pleśń i mikroorganizmy. Może to spowodować zmniejszenie skuteczności filtracji i zmniejszenie ładunków elektrostatycznych oraz sprawić, że filtr stanie się potencjalnym źródłem alergenów. Może być również przyczyną większego spadku ciśnienia obciążającego system HVAC.

Aby zachować świeżą, bezpieczną atmosferę w pojeździe DENSO zaleca wymianę kabinowego filtra powietrza co najmniej raz w roku, co (10 000) – (15 000) km lub zgodnie z zaleceniami producenta samochodu. Co nastąpi najpierw. Tylko systematyczna wymiana zapewnia stałą sprawność filtracji i dobre osiągi systemu HVAC, które gwarantują bardziej higieniczne i wygodniejsze wnętrze samochodu.

Nowy filtr

Filtr po 15 000 km

Znaczenie wymiany

- > **Przygotuj się na popyt** – ponad 80% wszystkich samochodów osobowych w Europie wyposażonych jest w kabinowe filtry powietrza i jest to trend rosnący. To sprawia, że coraz większe znaczenie ma wymiana części w odpowiednim czasie i oznacza dużą odpowiedzialność dla rynku wtórnego.
- > **Edukacja zdrowotna** – kierowcy rzadko zdają sobie sprawę ze znaczenia systematycznej wymiany kabinowych filtrów powietrza lub ze skutków opóźnienia. Poświęć czas na edukację swoich klientów. Niezwłoczne działanie pomoże ochronić zdrowie kierowców i pasażerów.
- > **W mieście i na wsi** – cząstki stałe, trujące gazy i nieprzyjemne zapachy występują zarówno na wsi, jak i w mieście, powodując, że wymiana kabinowego filtra powietrza jest ważna w każdym otoczeniu.

Свежий воздух – это естественно с салонным фильтром DENSO

Передвигаясь на автомобиле, очень важно знать, что воздух, которым вы дышите, чистый и свежий. Чтобы устранить запахи, пыль и раздражающие вещества, вам нужен салонный фильтр, которому вы можете доверять.

Оригинальное качество

Программа салонных фильтров DENSO предоставляет потребителям широкий ассортимент фильтров, разработанных и производимых по самому высокому стандарту из всех возможных – качеству оригинального оборудования (OE), которое выбирают производители для своих машин.

Ноу-хау DENSO

Будучи номер один в мире производителей систем климат-контроля и вторым по величине в мире брендом среди производителей автомобильных компонентов, DENSO по-настоящему хорошо понимает технологию салонных фильтров.

Система климат-контроля

Выбор

Созданная в соответствии со стандартами OE программа салонных фильтров DENSO предлагает:

- > 312 наименований
- > более 700 применений
- > 90% покрытия европейского и азиатского парка автомобилей

Технология пылевых и комбинированных фильтров

Программа DENSO включает как пылевые, так и комбинированные фильтры. Наши многослойные системы фильтрации нейтрализуют выхлопные газы и другие раздражители, одновременно улавливая и удерживая пыльцу и частицы пыли, и гарантируя, что воздух, поступающий в кабину, чистый и безвредный для дыхания. Каждый тип фильтра разработан индивидуально под конкретный автомобиль. Более того, фильтры DENSO не вызывают падения давления, которое потенциально может повредить систему климат-контроля.

Предлагая выдающуюся защиту, качество, технологию и выбор, салонные фильтры DENSO повышают удовольствие от езды.

Лучше по конструкции

Значение качества

Без эффективной очистки воздуха в салоне водитель и пассажиры могут подвергаться разнообразным опасным воздушным загрязнениям. Это могут быть пыль, сажа, пыльца растений, вредные газы и частицы от износа тормозов и шин. Если их не устранить, они могут причинять вред глазам, носу, легким, вызывая проблемы со здоровьем, раздражение и дискомфорт.

Так как салонные фильтры DENSO предлагают современное качество OE, они борются с проблемой загрязнений внутри салона чрезвычайно эффективно. Так же они подвергаются тщательному контролю на всех стадиях производства. Это означает не только более комфортабельное вождение, но и лучшую защиту от угрозы здоровью.

Распределение потоков воздуха в автомобиле

Превосходная технология

DENSO отлично разбирается в системах климат-контроля. Это значит, что наши салонные фильтры обладают улучшенной технологией фильтрации, обеспечивающей более здоровую среду в салоне. Ворсовый материал, который мы используем, содержит до пяти индивидуальных слоев, которые улавливают практически 100% вредных загрязнений и частиц, удерживая их от попадания в салон, где их можно было бы вдохнуть. Фильтры DENSO имеют чрезвычайно точный механизм уплотнения фильтра в корпусе, что повышает эффективность фильтрации. Их эффективная конструкция также защищает систему климат-контроля, принося пользу здоровью каждого пассажира, и, в особенности, людям с аллергией и астмой.

RU

Типы фильтров

Фильтры частиц

Фильтры частиц от DENSO предлагают исключительную защиту от пыли, сажи, пыльцы и частиц. Используя многослойный ворсовый материал для эффективного задержания пыли и твердых веществ, они так же имеют большую удерживающую емкость и минимальное сопротивление потоку воздуха.

Фильтры частиц

Комбинированные фильтры

Комбинированные фильтры DENSO предлагают все блокирующие, электростатические и нанофибровые технологии наших фильтров частиц, улавливая практически 100% пыли, пыльцы и твердых частиц до того, как их, возможно, вдохнут.

Но благодаря дополнительному слою из активированного угля, расположенному внутри фильтрующего материала, наши комбинированные фильтры имеют дополнительное преимущество.

Результат заключается в том, что воздух в салоне всегда свежий, приятный и полезный для дыхания.

Комбинированные фильтры

Как они работают?

- > Устранение путем задержания – частицам не дает пройти в салон плотно сцепленный нетканый фильтрующий слой. Частицы улавливаются и остаются в корпусе фильтра.
- > Электростатическое устранение – малые частицы с постоянным или временным зарядом притягиваются и удерживаются из-за электростатического взаимодействия.
- > Нанофибровые покрытия – слой тонких волокон вплетен в среду фильтра и предотвращает падение давления.

Замена

Хотя большинство современных новых автомобилей уже имеют салонные фильтры, через некоторое время они засоряются пылью и грязью, которая может содержать бактерии, плесень и микроорганизмы. Это делает фильтр потенциальным источником аллергенов, а также снижает эффективность фильтрации и электростатического заряда. Это может привести к падению давления, что нагружает систему климат-контроля.

Чтобы поддерживать чистую, безопасную атмосферу в салоне, DENSO рекомендует заменять салонный фильтр по меньшей мере один раз в год, каждые 10-15 тысяч километров или как указывает производитель автомобиля. Только регулярная замена гарантирует постоянную эффективность фильтрации и высокую отдачу системы климат-контроля и обеспечивает более гигиеничную и комфортабельную среду в салоне.

Новый фильтр

Фильтр после 15.000 км пробега

Смысл замены

- > Будьте готовы к спросу – более 80% европейских легковых автомобилей уже оборудованы салонным фильтром, и эта доля растет. Это делает своевременную замену более важной и объемной задачей рынка автозапчастей.
- > Обучение здоровью – водители редко бывают осведомлены о важности регулярной замены салонных фильтров или о последствиях поздней замены. Выделите время на то, чтобы обучить своих клиентов. Своевременные действия помогут защитить их собственное здоровье и здоровье пассажиров.
- > В городе и деревне – твердые вещества, частицы, вредные газы и неприятные запахи наносят вред как в городе, так и за городом, делая замену салонного фильтра важной в любой среде.
